1. Write a Program to find both the maximum and minimum values in the array. Implement using any programming language of your choice. Execute your code and provide the maximum and minimum values found.

```
Input: N=8, a[] = \{5,7,3,4,9,12,6,2\}
                                      Output : Min = 2, Max = 12
Code:
def find_min_max(arr):
          if not arr:
                       return None, None
           min val = arr[0]
          max_val = arr[0]
            for num in arr[1:]:
                       if num < min val:
                                   min val = num
                       if num > max val:
                                  max val = num
           return min val, max val
N = 8
a = [5, 7, 3, 4, 9, 12, 6, 2]
min_val, max_val = find_min_max(a)
print("Min =", min val)
print("Max =", max val)
output:
                                         OUTPUT DEBUG CONSOLE TERMINAL
